Deployment Documentation

Make sure Tomacat v9 is installed and MySql is installed

1. Download and unzip Zip file
2. Open eclipse workspace
3. Click file at top of eclipse -> open project from file system
4. Select directory and then click on the project folder name
5. Return back to file **explorer/finder not eclipse,** right click on SQL scripts, and click open the SQL scripts in the Sql workbench, not within eclipse
6. Run SQL script
7. Refresh the schemas on the right side of the screen and you will notice new schemas and tables
8. Right click on the project and click properties
   a. Go to **Server** -> select tomcat v9 -> apply and close
   b. Go back to the project properties
   c. Select **Project facets**
   d. On the top of the popup click the dropdown next to configurations and select default configuration for tomcat v9
   e. Click apply and close
9. run **home.jsp** on the tomcat 9 server
